

GOLD OUTPUT OF FAIRBANKS GROWS

New Region in the Yukon Country Expected to Yield \$6,000,000.

CLEARY CREEK IS NOW CENTER OF ATTRACTION

Many Prospectors Pushing Into Area West of Fairbanks District.

Louis M. Prindle of the United States Geological Survey has recently returned from the Alaskan field. During the past summer he has been making a geological reconnaissance between the international boundary and Fairbanks. This was Mr. Prindle's third season in the Yukon-Tanana region and he has therefore had exceptional opportunity to note the rapid development of the country. He reports that the output from the mines has increased tenfold each year. The gold production of Fairbanks amounted to approximately \$2,000,000 two years ago, and to more than \$4,000,000 last year. It is estimated that it will be worth between \$5,000,000 and \$6,000,000 this year. The productivity and prosperity of this region are attested by these remarkable figures.

Fairbanks Prosperous.
Fairbanks is now a thriving town of about 2500 inhabitants. Mr. Alfred Hill, Brook, chief of the survey's Alaska division, passed over its site in 1888, and knew it then as a small but a howling wilderness, unvisited by white men. The nearest Indian village was seventy miles away. The region now is humming with industry. The town of Fairbanks is lighted by electricity and heated by steam. It supports three banks, one daily paper, one weekly paper and a public school system. Business is at a high level. Although every valuable claim was said to be staked a year ago, the books in the Recorder's office show that his records are nearly double what they were last year.

Railroad Now Built.
Among the most important improvements of the district is the railroad which has been built since the season of 1904. The railroad has already proved of great advantage to the miners, and in connection with the Government wagon road to be built from the terminus of the railroad over the divide to Cleary creek will greatly facilitate the handling of freight.

Rival of Nome.
This year's production makes the Fairbanks district the peer of the Nome region in output, if not in leader. The districts at Fairbanks are mostly deep, extending to 30 or even 100 feet, so that shafts have been sunk. The gravels are frozen and mining is usually done by the steam-pump process. Work is carried on the year round. The character of the deposits makes mining more expensive here than in the Nome district, so that the profit from an equal production is not so great.

Gold on Cleary Creek.
The gold from the Fairbanks district has come from Cleary, Pedro and Fairbanks creeks, and the greatest of these, in point of production, is Cleary creek. Since the summer when gold was first found in the Fairbanks district, the town of nearly 200 people, has made its appearance. It is situated on Cleary creek, which is a tributary of Chitana river, itself a tributary of the Tanana. This creek is remarkable in that pay has been found along almost its entire course. Gold has been found in the headwaters to a point four miles below the place at which the creek widens into the valley of the Tanana. The gold on Cleary Creek is remarkable in that pay has been found along almost its entire course. Gold has been found in the headwaters to a point four miles below the place at which the creek widens into the valley of the Tanana. The gold on Cleary Creek is remarkable in that pay has been found along almost its entire course. Gold has been found in the headwaters to a point four miles below the place at which the creek widens into the valley of the Tanana.

New Ground Opened.
Dome creek and Ester creek, to the southwest of Cleary creek, are promising streams. Considerable work has been done on Dome creek, and a small mine has been located at a few points. Ester creek is already a producer.
To the east of the Fairbanks region, on the tributaries of the Satchek, prospecting is active.
The main excitement at present is, however, in the area west of Fairbanks district, on the headwaters of the Tanana river, a tributary of the Tanana from the south. Some gold has been found there in shallow diggings, and between 700 and 1000 people are now on the ground.

Good Ore in Alice.
The Alice mine in Upper Tule canyon is reported to be working in exceptionally good ore, which is being sacked for shipment. A vein has been traced for a distance of 150 feet, and has a four-foot ledge of 100 ounces. There are two strikes in the vein, one of a bluish quartz, and the other of a conglomerate character.
The owners are Wood & Smith, both local men, who are actively interested in many properties. The ore values run entirely in gold and are free milling—Goldfield Sun.

SOME OF HEWLETT'S FRIENDS DESPERATE

Work which friends of Frank J. Hewlett are doing to induce Gentiles to vote for him for reelection to the Council from the first ward, is about the most disreputable ever seen in Salt Lake. If the beneficiary of this dirty work is aware of it, and there is reason to believe he has knowledge of it, he deserves overwhelming defeat.
Hewlett, while a clever gentleman, is so thoroughly bound to the leader of the Mormon church, and is such a blind tool of the agents of the Utah Light and Railway company that his presence in Council is a constant menace to the people's interests. He votes as he is "counseled" to vote. He is a Republican only when he can be a Republican without injury to the church authorities. He has sustained the Democratic Mayor and voted with Democratic Councilmen against Republican Councilmen for no other reason than that the Democrats are Mormons and the Republicans Gentiles. His defeat should be one of the main objects of taxpayers of the first.

PACIFIC MINES ARE IN FAIRBANKS

Salt Lake Owners Pleased After an Inspection of the Property.

Special to The Tribune.
AMERICAN FORK, Utah, Nov. 5.—C. J. McNitt of Salt Lake City, treasurer of the Oregon Short Line railway, accompanied by E. McCarrick also of Salt Lake, visited the Pacific Mining company's property in the American Fork canyon during the week.

Was Favorably Impressed.
Mr. McNitt is one of the big shareholders in that property and is a mining expert of reputation. He was favorably impressed with the ground and compliments the management on present developments. He stated that he would not be surprised if the miners opened up a fine body of good carbonate ore any day.

New Company Formed.
The American Volunteer Mining and Milling company of Salt Lake City is a company newly formed, with a capitalization of \$100,000, divided into 25-cent shares. The officers are Edward Hines, president; Frank T. Hines, vice-president; George G. Armstrong, treasurer; and John L. Hines and William E. Vier, compose the board of directors. This company owns some valuable mining property in the American Fork canyon, upon which it is their intention to do some extensive development work.

SILVER PEAK ACTIVE.
District Promises to Yield Good Results to Prospectors.

George H. Lewis, a mining man of much experience, has returned from a recent trip to Silver Peak, says the Goldfield Sun. When seen today he stated that in his opinion it will not be long before Silver Peak district will be attracting the attention of mining men from all parts of the coast. He said that the amount of first-class milling equipment distributed through the mines is incredible. The ledges as a usual thing average from 10 to 20 feet in thickness. The ore is all hard well in free gold and there are many of them.

Mohawk-Alpine Pays.
Mr. Lewis reports that the Mohawk-Alpine has a large amount of work on its stamp mill running continuously. He says that in spite of the fact that the mine is a small one, it is a good producer of gold. He says that the mine is a good producer of gold. He says that the mine is a good producer of gold.

Alpine Eagle Active.
The Alpine Eagle is another property that is being extensively developed. All told, about eighty men are employed in the district and more men are gradually being put to work. The mine is a good producer of gold. He says that the mine is a good producer of gold.

In Interest of Schwab.
Dr. Voss of Goldfield is now in the district sampling several of the mines. He is thought to be operating in behalf of Charles M. Schwab, who is a mining man of much experience. He is thought to be operating in behalf of Charles M. Schwab, who is a mining man of much experience.

Drinkwater Not Sold.
The well-known Drinkwater property that made Silver Peak famous many years ago still belongs to the same owner. It has not been sold, as reported some time ago. It is estimated that this mine has produced 3000 tons of silver. It has not been sold, as reported some time ago.

Leaves for Milford.
P. B. McKee left for his home in Milford, Idaho, after a visit to the mines. He has been in the district for some time. He has been in the district for some time. He has been in the district for some time.

STAMPEDE IS ON.
Rich Strike Made in Bellehelen District, Kawich Range.
A great stampede from Tonopah to the vicinity of Stone Cabin began yesterday morning over a rich gold and silver strike made by the Clifford brothers, says the Goldfield Sun. Every kind of conveyance has been pressed into use, from an automobile to buggies and saddle horses.

Very Rich Strike.
The rock of that value is said to have come from a strike two and one-half miles in width, extending seventy feet down the hill from the main cropping. In that distance it is stated that good-grade ore is found. Blue veins in gold can be panned from the rock.

Like Goldfield District.
The cropping in appearance resembles the Goldfield district, though the assays are different in character from anything yet seen in the country. The great depth sunk by the Cliffords is two feet.

Near Five Mile Springs.
The location of the strike is twelve miles east of Five Mile springs and three miles west of the town of Eden. It is about the same distance northwest of Silver Bow. It is in the Bellehelen district and the foothills on the western slope of the Kawich range.

MILL FOR GODIVA.
Tip Top Plant Will Be Transferred to Tintic Mine.
Superintendent Jackson McChrystal of the Genial and Godiva mines and H. B. Benton, a well-known machinist, left last night for Hailey, Ida., where they will arrange for the removal to Eureka of the concentrating plant which was recently purchased from the Tip Top Mining company of that camp, says the Eureka Reporter. The machinery of the mill will be shipped to Eureka and rebuilt at the Godiva mine. No time will be lost in getting the plant in working order and it will be in operation on Godiva ore within two or three days. Superintendent McChrystal has made a large number of tests upon the low-grade ore of the Godiva mine and there is absolutely no question but that the new mill will be a success. There is a large amount of this character of ore blocked out in the Godiva mine and with a mill in successful operation the earnings of the property will be greatly increased.

MAY BE SURPRISE.
Region Around Callente Promises to Be One of Richness.
While varied and contradictory reports have come from Callente concerning the recently reported strikes in that section, late reports from an authoritative source indicate that development of lately located ground will add to the already great mineral resources of the State. A mining man of experience, who has made a study of the district, says that the region will shortly prove a great and agreeable surprise.

MILES OF BEAVER ARE PROVE RICH

Outlook for District Is Now Considered Better Than Ever Before.

FINE PRODUCT COMING FROM BURNING MOSCOW

Numerous Properties in Star District Giving Splendid Results.

Special to The Tribune.
MILFORD, Nov. 5.—The mining outlook for Beaver county is better and brighter today than at any time in its varied history of thirty-five years. It was the rich ore extracted from the "Rabbit" and other noteworthy claims in early days that enabled Matt Cullen and Denny Ryan to acquire an interest in the great Horn Silver mine at Frisco, distant ten miles.

Work of Prospectors.
It was the grand efforts of the pioneer prospectors of that early seventies that brought the old Star district to the notice of the outside world. When the district was first discovered by intrepid prospectors, many of whom are now dead, it was 150 miles from railroad connection. But even in those days, and laboring under disadvantageous conditions, the men who stayed with the old camp realized handsomely upon their holdings, and today the mines being worked are yielding rich results to the development being made.

Burning Moscow Rich.
The Burning Moscow, owned by Matt Cullen of Salt Lake, now being worked with a force of fifteen men, is developing rich results. The mine is a good producer of gold. He says that the mine is a good producer of gold.

Other Great Properties.
The Moscow is only one of the great properties being opened up in the district. The Harrington-Hickory, being developed by Mr. Newhouse, in the interest of the Majestic company, its owner, has been made a producer of gold. The mine is a good producer of gold.

Nellie Looks Good.
Upon the Nellie group the Forge has been opened up in an encouraging showing. This group is located south of the Moscow, and without question, is in the same vein, as the ore in the two groups is identical. The Mountain Chief claim, being worked by its owners, is giving evidence of permanency and rich results. This claim is situated on the Moscow vein, being only 150 feet distant.

McKee on the Ground.
The coming this morning of P. B. McKee, who has been in the district for some time, has contributed much to the prosperity of Milford, and his expressed determination to begin systematic work on the Tailman, is a source of gratification to the mining circle of this section of the State. The Tailman is looked upon by miners as one of the great mines of the district. Its future, under Mr. McKee's energetic management, will be looked forward to with interest.

COPPER FROM SIERRA.
Rich Specimens Are Attracting Attention of Nevada Operators.
Two rich specimens of copper ore each weighing about 150 pounds, were brought from the Sierra county to this city last night and were placed on exhibition on the steps of the Nevada bank, says the Reno Gazette-Journal.

Ledge Is Widening.
The ledge when first discovered was only a foot wide, but in sinking ten feet it has widened out to five feet and gives every indication of becoming much wider with depth. The ore is rich in copper and also carries gold and silver. Men are now working on the property and the mines will be rapidly developed by the owners.

PROGRESS OF CYANIDATION.
United States Reduction Company May Modify Its Plant.
Rumors of proposed changes in the plan of treatment at the plant of the United States Reduction and Refining company, at Colorado City, seem to grow daily, both in number and veracity, says the Engineering and Mining Journal. If later history should justify the genuineness of these rumors it would be significant indeed, for the concern referred to has been almost alone in the United States in practicing the cyanide process. The proposed change is said to be the adding and expanding of a plant and its process, is not stated; but the very proposal to make even a partial substitution means much for the present tendency of the wet extraction of gold.

BOYS BLOW UP MAGAZINE.
Bonfire Spreads and They Barely Have Time to Escape.
MORGAN, Pa., Nov. 5.—Boys who were playing about a quarry here built a bonfire of dried leaves near the powder magazine where 20 pounds of giant powder were stored. The flames spread and the woodwork of the magazine caught fire before the boys realized the danger. They had just enough time to get away when the powder exploded with a thunderous roar. A hole more than twenty feet deep marks the spot where the magazine stood.

MILKMAID MEN ARE ADRIPT ON DESERT

Team With Empty Wagon Returns, and Search Is Begun.

A. J. Hillen of San Francisco, representative of the Chicago Mining World, and George S. Hopkins, a mining engineer of Las Vegas, are adrift on the desert somewhere between this point and the Colorado river, without means of transportation, says the Las Vegas Age. The men hired a team Wednesday and started for the river. That evening they stopped at the camp of Albert Wright, about ten miles below Mesquite Springs, and later proceeded on their way. Next day the team, with empty wagon, returned, running by Mr. Wright's place on the road to Vegas. Friday, while on his way to town, Wright found the team standing in the road, brought it in and turned it over to Al Bishop, the owner.

Search Is Begun.
Mr. Wright states that Jack Teiford, who has a camp some distance below Wright's, has started out to search for the missing men. It is probable that they will soon be picked up, as they are not likely to be far from the main traveled road.

MILKMAID TO SHIP.
Good Ore Has Been Developed During This Season's Work.

Special to The Tribune.
AMERICAN FORK, Utah, Nov. 5.—Preparations are being made for the hauling of ore from the Milkmaid mine in American Fork canyon. Work has been going on at this property during the past summer, and the management has extracted some good ore. This property is owned almost exclusively by Salt Lake interests, and has the making of a good mine. It was one of the early producers and became prominent in the canyon's history.

Wyoming Is Shipping.
The Wyoming mine is still sending down its regular quota of ore and will do so during the winter, unless the weather becomes too severe and the snow too deep. Besides the working of the mine, the Teydes, who are operating it, are also doing considerable prospecting work in the property which they have recently acquired near the Wyoming. George Tyng is a veteran mining operator and has concluded that American Fork canyon has an excellent future before it. He intends to stay with the development of the canyon.

Pembroke Stationery Co.
Are headquarters in the West for surveying instruments, engineering and architects' supplies; also blue printers.
KISSED HER TOO MUCH
Girl Has Lover Arrested for Assault and Battery.

NEW YORK, Nov. 5.—Because she had been kissed too often Mary Chasinsky, Secaucus, N. J., summoned before Justice Manning in Jersey City, Washko Borougsky, charging him with assault and battery. The girl said the man had been kissing her for about a year, often met her on the road near Secaucus and kissed her.

"Why, he would kiss me as often as a hundred times a day, and his rough hand would make my lips sore," she said.
"My dinners were often delayed and the cooking would be spoiled by him annoying me while I was in the kitchen," the lawyer Fred J. Borougsky, representing Borougsky, said he thought his client was insane in love with the girl and could not see any harm in kissing her. He obtained a postponement of the case until next Monday.

EL PASO AND RETURN \$45.05
Via D. & R. G. Nov. 10, 11.
See any Rio Grande Agent for particulars.

DRESSES MATCH EYES
Each Costume Must Represent Symphony of Colors.
PARIS, Nov. 5.—The fashion this fall has veered round to directoire styles. The chic Parisienne favors tight fitting gowns, satin gowns, velvet by soft clinging draperies of mousseline de sole caught in by directoire yokes.

THE SEMI-WEEKLY TRIBUNE
Is the best general newspaper published between the Missouri river and the Pacific coast. No other weekly or semi-weekly paper covers the news of Utah, Idaho, Montana, Wyoming and Nevada so thoroughly. It reaches from one to four days earlier than the Eastern or coast papers. Every family should have a good metropolitan newspaper, and for the people of the intermountain country there is none that so completely fills the bill as The Tribune. The price is \$1.50 per year for two papers a week. Sample copy free on request. Write for one. Address THE TRIBUNE.

TEETH STOPPED BULLET
Miner's Life Is Saved in a Peculiar Way.
SCRANTON, Pa., Nov. 5.—A bullet from a rifle struck Patrick Noone of Moschick, a miner who was at a restaurant on West Market street today, but because his teeth were strong his life was saved.

The bullet struck Noone squarely in the mouth and flattened itself against his teeth. Two were knocked out, but the force of the bullet was checked, and this will no doubt save the man's life. It is alleged that another man did the shooting from his home near by.

The Chronic Bachelors.
"When a shoe dealer wants to get rid of a surplus stock of women's shoes," says the Chronic Bachelor, "he marks 'em down—not in price, but in size."—Cleveland Leader.

Chamberlain's Colic, Cholera and Diarrhoea Remedy. This is the most successful medicine in the world for bowel complaints, and is the only remedy that will cure chronic diarrhoea. Every bottle is warranted. For sale by all leading druggists.

Something New

Can be seen in every department.

New overcoats—the long ones with big loose skirts; the Paletot, form fitting; the three-quarter length, the very popular for dress suit coverings; the lighter topcoat, the one to wear when the others are too warm.

\$10 to \$35.
